

ABSTRACT OF THE DISCLOSURE

The invention provides stain-proofing agents capable of forming coating films excellent in rain streak stain resistance and durability thereof, coating compositions
5 comprising the stain-proofing agents, and articles coated therewith.

A stain-proofing agent comprising a polymer which contains at least one repeating unit having at least two hydroxyl groups, wherein the content (by mass) of the
10 repeating unit is more than 10%. A stain-proofing agent comprising a polymer which contains at least two repeating units having hydroxymethyl groups, wherein the content (by mass) of the repeating unit is more than 30%.
A coating composition comprising such a stain-proofing
15 agent and a coating resin such as a fluororesin.
